## **XPure joins Advisory Board SepCon**

XPure Systems was invited to join the Industrial Advisory Board (IAB) of SepCon (Separations Consortium). SepCon works to move cost-effective, high-performing separations technologies to the market faster through coordinated research at the national laboratories that target challenges relevant to industry and the U.S. Department of Energy, Bioenergy Technologies Office (BETO) pathways.

SepCon interacts with an external Advisory Board consisting of industry, government, and academic representatives who help the Consortium maintain an industry-relevant focus and knowledge of recent technology advances and challenges. This Advisory Board (IAB) meets with the Steering Committee and team leads to address topics including biomass fractionation, recovery of dilute carbon from aqueous streams, purification, process improvements, and catalyst preservation.

XPure would like to thank SepCon for their invitation and are proud to enter to the Advisory Board to contribute to this amazing consortium. For more information, please [contact us](#).
